

CSE Bliss rotary feeders are designed to provide an even feed across the full length of the hammermill grinding chamber. The product contact surfaces of the CSE feeders are made from 3/8" A-36 plate to last longer. They come with built in magnet protection that can be controlled automatically or manual. CSE can also rebuild any rotary feeder on the market. If your feeder is wore out don't throw it away CSE can rebuild it better then new. For more information on the CSE Bliss rotary feeders click on the the equipment tag above to see current literature or call 580-749-4895.
